Researchers develop tiny windmills that can power your gadgets (video)

Portable solar chargers aren't so out of the ordinary anymore, but minuscule windmills that can charge your phones? Now, those are something new. A couple of UT Arlington researchers, Smitha Rao and J.C.

Bigger is better has practically become a rule of thumb in the wind power business.

An Indian origin researcher Smitha Rao, working with her Taiwanese professor at the University of Arlington, Texas, may have found a solution to batteries dying out in cell phones.

The Booth Babes of CES 2014

CES has tech gadgets. It also has ladies guarding these gadgets. Here are pictures of those ladies (and a dude). Enjoy.

This Super-Tiny Windmill Could Someday Charge Your Phone

Researchers at the University of Texas at Arlington have come up with a way to build a nickel alloy windmill so small, 10 of them could be mounted on a grain of rice. And if all goes as planned, the little windmill could end up in a case that charges up your smartphone.

VIDEO: New power stations light up Africa

South Africa's largest utility company has said it is finally on track to complete the largest coal power-station in Africa.

Spanish-language books flourish thanks to e-readers

The surging popularity of the Kindle and Nook allows publishers to offer Spanish-language books in the U.S. at far lower prices than for printed copies. For decades, finding Spanish-language books in the U.S. was like tilting at windmills.

Crews working to restore power knocked out by winds

Power crews from Seattle City Light and Puget Sound Energy are working to restore power to thousands of customers after high winds swept through the area early this morning, causing weather-related outages. In Seattle, 28,000 customers lost power when high winds rolled through around 5 a.m., but wit
