Liberalism, Conservatism, and Americanism

The United States is viewed by many as the great conservative society, but it may also be seen as the most classically liberal policy in the developed world. To understand the exceptional nature of American politics, it is necessary to recognize, with H. G. Wells, that conservatism, as defined outside of the United States, is particularly weak in this country. Conservatism in Europe and Canada, derived from the historic alliance of church and government, is associated with the emergence of the welfare state. The two names most identified with it are Burke and Disraeli. Both were leaders of the conservatイves (Tories) in their countries. They represented the rural and aristocratic elements, sectors which disdained capitalism, disliked the bourgeoisie, and rejected materialistic values. Their politics reflected the values of noblesse oblige, the obligation of the leaders of society and the economy to protect the less fortunate.

The semantic confusion about liberalism in America arises because both early and later-day Americans never adopted the term to describe the unique American policy. The reason is simple. The American system of government existed long before the word "liberal" emerged in Napoleonic Spain and was subsequently accepted as referring to a particular party in mid-nineteenth-century England, distinct from the Tory or Conservative Party. While Europeans have called liberalism, Americans tend to as "conservatism": a deeply anti-socialist doctrine emphasizing the virtues of laissez-faire. Ronald Reagan and Milton Friedman, the two current names most frequently linked with this ideology, define conservativism in America. And in Friedrich Hayek, its most important European exponent noted, it includes the rejection of aristocracy, social class hierarchy, and an established state church. As recently in the April and June 1987 issues of the British magazine, two leading trans-Atlantic conservative intellectuals, Max Beiloff (Lord Beiloff) and Irving Kristol, debated the use of titles. Kristol argued that Britain is "sordid by a set of very thin, but tenacious, aristocratic pretensions... which foreclose opportunities and repel a spirit of equality that has yet to find its full expression..." This situation fuels many of the frustrations that make "British life... so cheerful, so absorbing in torment." Like Tocqueville, he holds up "social equality" as making "other inequalities tolerable in modern democracy." Beiloff, a Tory, contended that what drives conservativism in Britain is not its remaining links with the aristocratic tradition, but its alleged indifference to some of the abuses of capitalism. It is not the Dukes who lose their votes, but the "misfortunes of great wealth..." He wondered "why Mr. Kristol believes himself to be a 'Conservative,'" since he is "as incapable as most Americans of being a conservative in any profound sense." Lord Beiloff concluded that "Conservatism must have a 'Tory' element or it is only the old Manchester School," i.e., liberal.

Canada's most distinguished conservative intellectual, George Grant, emphasized in his _Leslie for a Nation_ that "Americans who call themselves 'Conservatives' have the right to that title only in a particular sense. In fact, they are old-fashioned liberals... Their concern is for freedom from governmental interference has more to do with nineteenth century liberalism than with traditional conservatism, which asserts the right of the community to certain freedoms_
in the name of the common good." Grant bemoaned the fact that American conservatism, with its stress on the virtues of competition and links to business ideology, focused on the rights of individuals and ignored communal rights and obligations. He noted that there has been no place in the American political philosophy "for the organic conservation that predates the age of progress. Indeed, the United States is the only society on earth that has no traditions from before the age of progress." The recent efforts, led by Anwar Sadat, to create a "communitarian" movement are an attempt to import Tunisian to America. But the United States has recognized the link and has shown considerable interest in Tunisian ideas.

Still, it must be recognized that American politics have changed. The 1920s produced a qualitative difference. As Richard Hofstadter wrote, this period brought a "social democratic stage" to the United States for the first time in its history. The Great Depression produced a strong emphasis on planning, on the welfare state, on the role of the government as a major regulatory actor. An earlier spaying of statism sentiment occurred immediately prior to World War I, as evidenced by the significant support for the largely Republican Progressive movement led by Robert La Follette and Theodore Roosevelt and the increasing strength (up to a high of 6% of the national vote in 1912) for the Socialist Party. They failed to change the political system. Grant McConnell explains the failure of the Progressive movement as stemming from "the pervasive and inherent ambiguity in the movement" about confronting American anti-communist values. "Power as it exists was antagonistic to democracy, but how was it to be curbed without the erection of superior power?"

Prior to the 1920s, the American trade union movement was also "in its novelty antithesis. The American Federation of Labor (AFL) was syndicalist, believed in more union, not more state power, and was anti-socialist. Its predominant leader for forty years, Samuel Gompers, once said when asked about his politics, that he believed he was the apostle of an anarchist. And he was right. Europeans and others who perceived the Commerz-bad AFL as a conservative organization because it opposed the socialist movement were wrong. The AFL was an extremely militant organization, which engaged in violence and had a high strike rate. It was not conservative, but rather a militant anti-socialist group. The United States also had a revolutionary trade union movement, the Industrial Workers of the World (IWW). The IWW, like the AFL, was not socialist. It was explicitly anarchistic, or rather, anarchi-syndicalist. The revived American radical movement of the 1900s, the so-called New Left, was also not socialist, while not anarchistic either, it was much closer to anarchism and the IWW in its ideology and organizational structure than to the Socialists or Communists.

The New Deal, which owed much to the Progressive movement, was not socialist either. Franklin Roosevelt's death wanted to maintain a capitalist economy. In running for president in 1932, he criticized Herbert Hoover and the Republicans for deficit financing and expanding the economic role of the government, which they had done in order to deal with the Depression. But his New Deal, he argued out of the need to confront the massive economic downturn, drastically increased the activist strain in American politics, while furthering public support for trade unions. The New Labor movement, which arose concurrently, the Committee for
Industrial Organization (CIO), unlike the American Federation of Labor (AFL), was virtually social democratic in its orientation. In fact, socialists and communists played important roles in the movement. The CIO was much more politically active than the older Federation and helped to press the Democrats to the left. The Depression led to a kind of moderate "Europeanization" of American politics, as well as of its labor organizations. Class factors became more important in differentiating party support. The conservatives, increasingly concentrated among the Republicans, remained anti-state and laissez-faire, but many of them grew willing to accommodate an active role for the state.

This pattern, however, gradually inverted after World War II as a result of long-term prosperity. The United States, like other parts of the developed world, experienced what some have called an economic miracle. The period from 1945 to the 1980s was characterized by considerable growth (mainly before the mid-1970s), an absence of major economic downturns, higher rates of social mobility, and the expansion of higher educational systems—from a few million to 11 or 12 million going to college and universities—which fostered this mobility. America did particularly well economically, leading Europe and Japan by a considerable margin in terms of new job creation. A consequence of these developments was a refurbishing of the classical liberal ideology, that is, American conservatism. The class tensions produced by the Depression lessened, reflected in the decline of the labor movement and lower correlations between class position and voting choice. And the members of the small (by comparative standards) American labor movement are today significantly less favorable to government action than Europeans unionists. Fewer than half of American union members are in favor of the government providing a decent standard of living for the unemployed, as compared with 69 percent of West Germans, 72 percent of British, and 73 percent of Italian unionists. Even before Ronald Reagan entered the White House in 1981, the United States had a lower rate of taxation, a less developed welfare state, and many fewer government-owned industries than other industrialized nations.

View from the Inside

Public opinion polls are not simply neutral devices used to measure American public opinion. They have become tools of the trade for politicians and presidents, especially in recent years. Pollsters play a key role in helping candidates shape their campaigns and in helping political leaders govern.

The use of pollsters by presidents and other politicians has become the source of some controversy. Critics point out that the heavy use of public opinion polls tends to turn leaders into followers and ship enquirers politicians to tell the public only what it wants to hear—a practice that can lead to erratic public policy, a dangerous short-term point of view, and a lack of critically needed perspective. Paradoxically, critics suggest, politicians who rely too much on public opinion polls may end up losing touch with the
